Summary

Computer Science undergraduate and aspiring **DevOps Engineer** with hands-on experience building **CI/CD pipelines** using **Jenkins** and **GitHub**, and deploying containerized applications on **AWS** (**EKS**, **ECS Fargate**, **ECR**) with **Docker** and **Kubernetes**. Skilled in **Infrastructure as Code** with **Terraform**, **DevSecOps** practices (**SonarQube**, **OWASP Dependency-Check**), **GitOps** and **Linux**, with full-stack development in **Java**, **Node.js** and **React**. Seeking a **Cloud Engineer** or **DevOps Engineer** role focused on automation, infrastructure reliability and fast, secure releases.

Education

Noida International University — **Greater Noida, India**
Bachelor of Technology in Computer Science and Engineering – CGPA: 8.76/10 — *Aug 2023 – Jun 2027*

Government Boys Senior Secondary School No. 1 — **Delhi, India**
Senior Secondary — *2020 – 2022*

Technical Skills

Languages: Java, JavaScript
Cloud: AWS, EC2, ECS Fargate, ECR, EKS, Application Load Balancer (ALB)
DevOps/CI-CD: Linux, Jenkins, CI/CD Pipelines, GitOps, Argo CD, Helm, Terraform (Infrastructure as Code)
Security & Monitoring: SonarQube, Trivy, OWASP Dependency-Check, Prometheus, Grafana
Containers & Orchestration: Docker, Kubernetes
Web Technologies: HTML5, CSS3, React.js, Next.js, Node.js, Tailwind CSS, REST APIs, Socket.IO, Prisma
Databases: MySQL, PostgreSQL
Tools & Version Control: Git, GitHub, VS Code
Core CS Fundamentals: DSA, OOP, DBMS, Operating Systems, Software Engineering

Projects

CodeOrbit | *React, Socket.IO, Yjs, Monaco, Docker, AWS* — **Live Link** | **GitHub**

- Built a **real-time collaborative code editor** in React with **Monaco Editor**, featuring room-based sessions, user presence indicators and color-coded cursors so teams can code together from any browser.
- Applied **Yjs CRDT** merging over **Socket.IO** so simultaneous keystrokes converge into one consistent document, with no manual conflict resolution.
- Containerized the app with Docker and deployed it on AWS ECS Fargate, pulling images from ECR and routing traffic through an Application Load Balancer for a repeatable, scalable release process.

DocMeet | *Next.js, Prisma, PostgreSQL, Clerk, Vonage* — **Live Link** | **GitHub**

- Engineered a full-stack **telehealth platform** on Next.js that lets users find specialists, schedule visits and join live video consultations from **responsive dashboards**.
- Designed role-based access and workflows for patients, doctors and admins, simplifying doctor onboarding and credential verification with dedicated dashboards for each role.
- Wired **Clerk** authentication, **Prisma with PostgreSQL** storage and the **Vonage Video API** into a **credit-based booking system**, delivering secure sign-in, durable patient data and face-to-face video calls.

CI/CD & DevSecOps Pipeline | *Jenkins, Docker, Kubernetes, Argo CD, AWS* — **GitHub**

- Architected and implemented a robust **Jenkins** pipeline connected to GitHub, generating Docker images that streamlined the production delivery process for over 50 application releases.
- Executed a comprehensive security scanning strategy utilizing **SonarQube** and **OWASP Dependency-Check**, resulting in the identification of **85+** high-risk libraries, leading to improved software compliance and risk management protocols.
- Deployed **Terraform** to provision cloud infrastructure on **AWS EKS**, achieving a seamless integration with existing CI/CD pipelines; this automation resulted in a **25%** reduction in manual setup time for new environments.

Certifications

AWS Cloud Technical Essentials (AWS) Credential **2026**
Create Branching Strategies for Parallel Development (Coursera) Credential **2026**
Node.js & MongoDB: Developing Back-end Database Applications (IBM) Credential **2026**
